

QUESTIONNAIRE: REMOTE CONNECTIVITY

The CWC research unit at the University of Oulu and Luleå Technical University (LTU) have started a joint Interreg Nord project called [Arctic 5G Test Networks](http://www.arctic5g.eu/). One aim of the project is to collect examples and experience what poor connectivity means for daily life, school work, using e-services, using e-Payments and business opportunities.

The questionnaire can be filled anonymously, and results will be published so that persons cannot be identified. In a case the respondent would like to be contacted later for possible further discussion, contact details can be left. You can answer in English, Swedish, Finnish or Russian.

You can access questionnaire [here](http://www.arctic5g.eu/) or by scanning the QR-code. Questionnaire can also be found from the project's web pages <http://www.arctic5g.eu/> at the point Questionnaire.
